DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 20-23 and 25 are rejected under 35 U.S.C. 102(e) as being anticipated by Gai et al (US Patent 6,032,194).

Regarding to claim 20, Gai discloses a computer readable medium (fig. 2 col. 8 lines 45-50) containing executable program instructions for use by an intermediate network device 214 having a plurality of ports 230 for receiving and forwarding network messages (fig. 2 col. 8 lines 3-5), the executable program instructions comprising program instructions for configuring one or more ports as access ports 300 (fig. 3A col. 8 lines 57-60); configuring one or more access ports as rapid forwarding ports 310 (fig. 3A col. 8 lines 65-67 and col. 9 lines 1-3); identifying all ports that have been configured

Art Unit: 2616

as access ports with rapid forwarding (fig. 3A col. 8 lines 24-39); and upon initialization of the device (detect link failure), placing each identified access port 230 with rapid forwarding directly to a forwarding spanning tree port state, without transitioning such identified ports between any intermediary spanning tree port states, so that network messages may be received and forwarded by such identified ports immediately (fig. 3D col. 12 lines 32-42).

Regarding to claim 21, Gai discloses monitoring each of the one or more access ports configured with rapid forwarding for receipt of a configuration bridge protocol data unit (BPDU) message and in response to receiving a BPDU message at one of the access ports configured with rapid forwarding, placing the respective access port in a blocking spanning tree port state (fig. 3E col. 14 lines 25-51).

Regarding to claim 22, Gai discloses the intermediate network device has a memory 240 and the configuration of ports as access ports with rapid forwarding is stored at the memory (fig. 2 col. 8 lines 12-24).

Regarding to claim 23, Gai discloses placing one or more other ports in a listening spanning tree port state (fig. 3D col. 10 lines 1-5), upon initialization of the device.

Regarding to claim 25, Gai discloses generating and issuing one or more configuration bridge protocol data unit (BPDU) messages from each access port configured as rapid forwarding (col. 10 lines 1-25).

Allowable Subject Matter

3. Claims 24, 26, and 27 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
